

Decision-making feedback report: test

Decision-making Processes in Organizations — September 21, 2025

See the **Appendix** for the full wording of the CRT questions and all 40 REI items, including which items belong to each scale/subscale and which are reverse-scored.

CRT (Cognitive Reflection Test)

Your CRT result: 1/3 correct.

You answered 1 of the 3 CRT problems correctly. This suggests that you occasionally paused to check your intuitive response, but in most cases you went with your first impression.

Comparison: In earlier research, the average score was about 1.24. The class average here is 1.20.

Your score in the CRT

The chart below shows which items you got correct or incorrect.

Scale	You	Earlier research	Class average (this course)
CRT total (0–3)	1	1.24	1.20

Item explanations

- **Q1 Bat & ball** — Heuristic **10¢**. Correct **5¢** (bat \$1.05 + ball \$0.05 = \$1.10; bat is exactly \$1 more).
- **Q2 Machines** — Heuristic **100 min**. Correct **5 min** (each machine makes 1 widget in 5 min; 100 machines → 100 widgets in 5 min).
- **Q3 Lily pads** — Heuristic **24 days**. Correct **47 days** (doubles daily; if full on day 48, it was half on day 47).

What the CRT measures

The Cognitive Reflection Test is not an IQ test. It captures how often you *engage slow, deliberate reasoning (System 2)* to override an immediate, intuitive answer generated by *fast, automatic thinking (System 1)*. The items are designed so that a compelling but wrong answer pops to mind quickly (e.g., 10¢, 100 minutes, 24 days). Correct responses require noticing the trap and engaging effortful calculation.

Why people give the wrong answer. System 1 produces fluent, plausible answers that *feel* right. Without pausing to check, we accept them. CRT success typically reflects a tendency to pause, scrutinize, and compute when a question seems easy.

What CRT tends to predict. Studies link higher CRT to fewer classic reasoning slips, better truth discernment online, and reflective shifts in certain moral judgments and values. See the research highlights below.

What your CRT score tends to relate to (in research)

- **Fewer classic reasoning slips** (e.g., framing, base-rate neglect, denominator neglect, conjunction fallacy, sunk cost) on lab tasks that tap everyday judgment. These links remain even after accounting for cognitive ability. (*Toplak, West, & Stanovich, 2011*)
- **Better discernment online:** people who score higher on CRT tend to share news from *higher-quality sources* on social media and use more “insight”/self-regulation language—evidence that reflective thinking shows up in real behavior, not just surveys. (*Nature Communications, 2021*)

- **Everyday beliefs:** higher analytic/reflective thinking relates to *lower* endorsement of conspiracy and paranormal claims and pseudo-profound statements, and to more evidence-sensitive beliefs. (*Pennycook et al., 2015*)
- **Moral judgment & values:** reflective thinkers are more likely to override immediate gut reactions in tricky moral scenarios, and tend to endorse more consequence-focused moral values. (*Pennycook et al., 2015*)

These are group-level trends from research samples—not prescriptions. A low CRT score on three riddles does not define you; it simply suggests moments where slowing down may help.

REI (Rational–Experiential Inventory)

The REI (Pacini & Epstein, 1999) measures two complementary styles: **Rational** (analytic, effortful, rule-based) and **Experiential/Intuitive** (holistic, affect-based, pattern recognition). Each has two subscales: *Ability* (how effective it feels) and *Engagement* (how much you like to use it). See the **Appendix** at the end for the full list of items.

Your scores vs. literature (men/women) and Class avg (*this course*)

Scale	Range	You	Men	Women	Class avg (this course)
Rational (overall)	1–5	3.50	3.54	3.36	3.37
Rational ability	1–5	2.40	3.54	3.29	3.33
Rational engagement	1–5	4.60	3.55	3.42	3.41
Experiential / Intuitive (overall)	1–5	2.75	3.33	3.57	3.60
Experiential ability	1–5	2.30	3.35	3.53	3.59
Experiential engagement	1–5	3.20	3.31	3.61	3.61

REI Subscales – Student 15

Your decision-style quadrant

You are in: **Detail conscious**

Detail conscious (High Rational + Low Intuitive): Prefers structured, logical reasoning and systematic decision-making. May underuse intuitive cues (e.g., quick social judgments, pattern recognition) that help in some contexts.

About the other quadrants (for reference):

- **Cognitively versatile (High Rational + High Intuitive):** Comfortable switching between careful analysis and gut feelings. Useful for complex problem-solving, creativity, and adapting your style to situational demands.
- **Big-picture conscious (Low Rational + High Intuitive):** Relies strongly on intuition, emotion, and holistic impressions. Supports creativity and rapid judgments but may underuse effortful analysis for complex/technical tasks.
- **Non-discerning (Low Rational + Low Intuitive):** Reports low confidence in both analytic and intuitive styles. Can feel less certain in judgment; deliberately strengthening either analysis or intuitive trust can help.

Appendix

A. Cognitive Reflection Test (CRT) — Full Items

Item	Wording	Correct
CRT Q1 (Bat & Ball)	A bat and a ball cost \$1.10 in total. The bat costs \$1.00 more than the ball. How much does the ball cost?	5 cents (0.05)
CRT Q2 (Widgets)	If it takes 5 machines 5 minutes to make 5 widgets, how long would it take 100 machines to make 100 widgets?	5 minutes
CRT Q3 (Lily pads)	In a lake, there is a patch of lily pads. Every day, the patch doubles in size. If it takes 48 days for the patch to cover the entire lake, how long would it take for the patch to cover half the lake?	47 days

The CRT is not a test of intelligence. It measures how often we engage deliberate 'System 2' thinking to override an immediate but wrong 'System 1' answer.

B. REI Items (Rational–Experiential Inventory) — Full List

The table below lists all items from the survey, grouped by main scale and subscale. Items marked Yes under **Reverse scored?** were keyed in the opposite direction (i.e., 1↔5).

Item	Wording	Main scale	Subscale	Reverse scored?
RS_1	I try to avoid situations that require thinking in depth about something	Rational	Rational engagement	Yes
RS_2	I'm not that good at figuring out complicated problems	Rational	Rational ability	Yes
RS_3	I enjoy intellectual challenges	Rational	Rational engagement	No
RS_4	I am not very good at solving problems that require careful logical analysis	Rational	Rational ability	Yes
RS_5	I don't like to have to do a lot of thinking	Rational	Rational engagement	Yes
RS_6	I enjoy solving problems that require hard thinking	Rational	Rational engagement	No
RS_7	Thinking is not my idea of an enjoyable activity	Rational	Rational engagement	Yes
RS_8	I am not a very analytical thinker	Rational	Rational ability	Yes
RS_9	Reasoning things out carefully is not one of my strong points	Rational	Rational ability	Yes
RS_10	I prefer complex problems to simple problems	Rational	Rational engagement	No

Item	Wording	Main scale	Subscale	Reverse scored?
RS_11	Thinking hard and for a long time about something gives me little satisfaction	Rational	Rational engagement	Yes
RS_12	I don't reason well under pressure	Rational	Rational ability	Yes
RS_13	I am much better at figuring things out logically than most people	Rational	Rational ability	No
RS_14	I have a logical mind	Rational	Rational ability	No
RS_15	I enjoy thinking in abstract terms	Rational	Rational engagement	No
RS_16	I have no problem thinking things through carefully	Rational	Rational ability	No
RS_17	Using logic usually works well for me in figuring out problems in my life	Rational	Rational ability	No
RS_18	Knowing the answer without having to understand the reasoning behind it is good enough for me	Rational	Rational engagement	Yes
RS_19	I usually have clear, explainable reasons for my decisions	Rational	Rational ability	No
RS_20	Learning new ways to think would be very appealing to me	Rational	Rational engagement	No
ES_1	I like to rely on my intuitive impressions	Experiential	Experiential engagement	No
ES_2	I don't have a very good sense of intuition	Experiential	Experiential ability	Yes

Item	Wording	Main scale	Subscale	Reverse scored?
ES_4	Using my gut feelings usually works well for me in figuring out problems in my life	Experiential	Experiential ability	No
ES_5	I believe in trusting my hunches	Experiential	Experiential engagement	No
ES_6	Intuition can be a very useful way to solve problems	Experiential	Experiential engagement	No
ES_7	I often go by my instincts when deciding on a course of action	Experiential	Experiential ability	No
ES_8	I trust my initial feelings about people	Experiential	Experiential ability	No
ES_9	When it comes to trusting people, I can usually rely on my gut feelings	Experiential	Experiential ability	Yes
ES_10	If I were to rely on my gut feelings, I would often make mistakes	Experiential	Experiential engagement	Yes
ES_11	I don't like situations in which I have to rely on intuition	Experiential	Experiential engagement	No
ES_12	I think there are times when one should rely on one's intuition	Experiential	Experiential engagement	Yes
ES_13	I think it is foolish to make important decisions based on feelings	Experiential	Experiential engagement	Yes
ES_14	I don't think it is a good idea to rely on one's intuition for important decisions	Experiential	Experiential engagement	Yes

Item	Wording	Main scale	Subscale	Reverse scored?
ES_15	I generally don't depend on my feelings to help me make decisions	Experiential	Experiential ability	No
ES_16	I hardly ever go wrong when I listen to my deepest gut feelings to find an answer	Experiential	Experiential engagement	Yes
ES_17	I would not want to depend on anyone who described himself or herself as intuitive	Experiential	Experiential ability	Yes
ES_18	My snap judgments are probably not as good as most people's	Experiential	Experiential engagement	No
ES_19	I tend to use my heart as a guide for my actions	Experiential	Experiential ability	No
ES_20	I can usually feel when a person is right or wrong, even if I can't explain how I know	Experiential	Experiential ability	Yes
